MOMMA

ceramiche group

Made in Italy: certified beauty, tradition, quality and innovation: these are the strong points of Italian ceramics, a category to which we belong by vocation and merit. Identifying with the international brand of value 'made in Italy' requires passion for the well-made, the choice to produce ceramics of excellent quality and above all 100% made in Italy. What counts most when competing in the markets of the world is the high level of creativity that is born in the land of beauty, where designers, technicians and workers are trained according to the principle of aesthetic value achieved by combining design talent with meticulous attention at every stage of the production process. Italian art - which has always been intertwined with first-class craftsmanship - gives life to industry, ceramics in particular, with its great past.

Instructions for the laying

All Idea Ceramica products & lines are of the highest quality, and their installation is easy and does not present any kind of inconvenience or require any special or unusual procedure. In order to obtain the best possible end result we suggest you to follow these simple steps.

INSTALLATION INSTRUCTIONS

These materials, being ceramic products, present chromatic and veining variations in the single pieces. The material you are about to install, if compared to the sample from which the selection was made, will present certain differences, the sample is just indicative of the characteristics of the products, it does not represent the whole production. Please, check and mix the setting materials before beginning installation. For the combined horizontal-vertical setting, the joint between the vertical elements should be half the size of the one between the horizontal elements. IE: 1,5 mm between the vertical elements and 3 mm between the horizontal. The same for the combined setting of 15,3x100 with horizontal. In the showers we recommend you use water resistant grout for the joints.

The company disclaims all responsibility for installations carried out with adhesive different from those indicated or from others that are not technically and unmistakably the same.

CE Marking

The Company fulfils its CE marking obligations through

UNI EN Regulations

The **UNI EN** standards, adopted by the CEN (European Committee for Standardization) are valid throughout Europe and apply to all types of first choice tiles, pressed and extruded, glazed and unglazed, of any size. The **UNI EN** standards are compatible with the latest amendments of the new **ISO** international standards, and include:

GENERAL REGULATIONS

The new harmonised standard **EN 14411** that provides definitions, classifications, features and designation requirement for ceramic tiles and annuls and replaces standard **EN 87**.

The new standard **UNI EN ISO 10545_1** that sets forth the rules for the composition of sample lots, and replaces the previous standard **EN 163**.

PRODUCT REGULATIONS

Ceramic tiles are divided into groups according to how they are formed and their water absorption characteristics. In terms of forming methods, there are two groups: **A** and **B**:

A Extruded tiles (formed by means of passing a malleable paste through an extrusion machine; the resulting band is cut into the desired dimensions).

B Pressed tiles (obtained by pressing powdered raw materials in special molds). Afterwards, these tiles may be glazed or not.

The groups are broken down further according to their water absorption characteristic (porosity):

- Gruppo B Ia = $E \leq 0,5\%$ **UNI EN 14411_G**
- Gruppo B Ib = $0,5\% < E \leq 3\%$ **UNI EN 14411_H**
- Gruppo B IIa = $3\% E \leq 6\%$ **UNI EN 14411_J**
- Gruppo B IIb = $6\% < E \leq 10\%$ **UNI EN 14411_K**
- Gruppo B III = $E > 10\%$ **UNI EN 14411_L**

The regulations define the sizes, the size tolerances, the mechanical, physical and chemical properties, the appearance and designation of the ceramic tiles in each group. The present range of Herberia tiles is entirely composed of pressed tiles and belongs to groups B Ia, B Ib, B IIa, B IIb, B III.

REGULATIONS FOR TESTING METHODS

These regulations define the methods to be used for determining size and appearance characteristics, as well as physical and chemical properties. Standard **14411** refers to the testing methods of the new **UNI EN ISO 10545** standard.
